

BPC-157

Body Protection Compound 157

HEALING

GUT HEALTH

TENDONS

JOINTS

ANTI-INFLAMMATORY

WHAT IS IT?

BPC-157 is a synthetic pentadecapeptide (15 amino acids) derived from a protective protein found in human gastric juice. It has profound tissue-healing properties across multiple organ systems — from tendons and ligaments to gut mucosa and brain.

DOSING AT A GLANCE

Injection (SC/IM)	Oral (gut focus)	Frequency	Cycle Length
250–500 mcg	500 mcg–1 mg	1–2x/day	4–12 weeks

KEY BENEFITS

- Accelerates healing of tendons, ligaments, and muscle tears
- Heals leaky gut, IBS, ulcers, and intestinal damage (including NSAID-induced)
- Reduces systemic inflammation — protective for joints and connective tissue
- Promotes angiogenesis (new blood vessel formation) to injured areas
- Neuroprotective — improves recovery from traumatic brain injury
- Counteracts corticosteroid-related tendon damage
- Reduces pain and swelling at injury sites within days
- Supports dopamine and serotonin systems — mood stabilizing effects
- Protects against alcohol and NSAID-induced stomach damage

HOW IT WORKS

BPC-157 upregulates growth hormone receptor expression in injured tissue, promotes VEGF (vascular endothelial growth factor) synthesis, and modulates the nitric oxide system. It activates the FAK-paxillin pathway for tendon healing and influences the gut-brain axis via vagus nerve interaction.

PROTOCOLS

- **Injury Healing:** 500 mcg SC/IM near injury site, 1–2x daily for 4–8 weeks.

- **Gut Healing:** 500 mcg–1 mg oral (capsule or dissolve in water), taken fasted, 2x daily.
- **Systemic:** 250–500 mcg SC abdomen, 1x daily maintenance.
- **Stack Option:** BPC-157 + TB-500 for systemic + local healing synergy.

SIDE EFFECTS

- Generally very well tolerated — minimal reported side effects
- Injection site irritation (mild, transient)
- Fatigue or drowsiness at high doses (rare)
- No significant endocrine disruption

STORAGE

Lyophilized powder: room temp. Reconstituted: refrigerate, use within 30 days.
